Morning [redacted] Owen.

Here is a link to a really great Ted Talk that explains how wind turbines work, what you may find interesting is that just because we might not feel wind on the ground, wind speed typically increases the higher into the atmosphere you go, hence why the blades are spinning.

Morning Nathan,

Official Enquiry

Laying awake since just after 4 am, the invasive rumbling and thumping being emitted from the operating turbines got me thinking.

How do turbines work when there is no wind to virtually no wind?

Regards

Owen
